PORTFOLIO & AI PROJECT WRITE-UPS: liammnester97.github.io

EDUCATION

The University of North Alabama , Florence, AL M.S. in Business Administration, Data Analysis	May 2026
The University of Alabama , Tuscaloosa, AL M.S. in Mechanical Engineering, Thermal-Fluid Sciences	May 2021
The University of Alabama , Tuscaloosa, AL B.S. in Mechanical Engineering	May 2020

PERSONAL AI PROJECTS

- **Obsidian + GitHub AI Knowledge System** (*private repo*) — built a persistent memory/context architecture so agents retain durable knowledge and context across sessions instead of starting cold each time
- **Code-Based CAD via Claude Code** — generates CAD models from code, iterating custom skills/agents to precisely control AI output instead of relying on one-shot prompting
- **OpenAI Build Week — Debugging-as-Gameplay** — built a game that disguises code-debugging exercises as gameplay to teach students learning to code
- **Local LLM Experimentation** — runs and stress-tests local models on Raspberry Pi hardware; backlog project to build a Raspberry Pi cluster to learn distributed/cluster computing

WORK EXPERIENCE

Blue Origin, Highlands Ranch, CO 2026 – Present

Liquids Project Engineer, Transporter / Transfer Stage – Lunar Permanence

- **Subsystem Ownership & Requirements** (*P6 Primavera, Jira, Confluence, MS Office*)
 - Own integration and execution of liquids subsystem development across full lifecycle (definition, design, build, test, and delivery), including requirements traceability, configuration control, and risk/change management across design, analysis, manufacturing, and supplier stakeholders
- **Cross-Functional Integration & Leadership** (*Agile, Jira, Confluence*)
 - Translate program objectives into actionable work scope, leading cross-functional engineering teams and responsible engineers through backlog management and task prioritization to keep technical decisions aligned with program milestones
 - Serve as primary interface between engineering, program management, and supply chain to align priorities, manage trade-offs, and ensure delivery against program objectives
- **AI Solutions & Tooling** (*Claude Code, Codex, BlueGPT, MCP*)
 - Designed a repeatable process for rapidly iterating IMS/MS Project schedules with Claude Code, building custom agents and skills that encode the team's scheduling logic to produce consistent, reusable outputs instead of one-off manual edits
 - Built Jira-integrated reporting agents that pull and structure subsystem status data into a standing report format for scrums and management reviews, replacing manual compilation
 - Daily hands-on builder of custom agents/skills and MCP-connected tools across Claude Code, Codex, and BlueGPT, with working knowledge of context-window and tool-input management to keep outputs reliable
 - Coach teammates on adopting AI tools for their own workflows, including Windchill, Jira, and analysis/design scripting for their subsystems — grassroots adoption driven by genuine enthusiasm for teaching, not a formal training mandate

Aerojet Rocketdyne (AR) – An L3Harris Corp, Denver, CO 2020 – 2025

Senior Specialist Project Engineer, Research/Development Solid Rocket Motors (SRMs)

Relevant programs: LM NGI (Stage 2 SRM IPTL / CAM), LM FBM PBCS and NFJM (Project Engineer)

- Managed cost, schedule (IMS), and technical performance across 10+ control accounts (Discrete/LOE) totaling \$15MM+, using EAC/ETC, VARs, BCRs, and WBS to drive recovery planning and decision-making, while leading cross-functional design, analysis, manufacturing, and test teams from early design through qualification and delivery (*MS Project, MS Excel, Power BI*)
- Led development of technical and financial proposals and business cases informing program/technology investment decisions and partnership/supplier strategy

SKILLS

– AI Training & Adoption Coaching	– IMP/IMS-Level Scheduling	– Earned Value Mgmt (EVM)
– Data Analysis & Visualization	– Technical Writing & Presenting	– Risk & Configuration Mgmt
– AI Agents, Skills, MCP & Context Mgmt	– Systems Engineering & Requirements	– Project Management (Agile/Waterfall)
